FAIR DATA DAY

29 November
2022
Jaarbeurs
Utrecht

Register now!

The first FAIR Data Day is an in-person event revolving around the central theme: Reusing data to advance science, showcasing inspirational examples and bringing together communities.

Join your peers, researchers, data stewards and research software engineers to exchange and learn more about the advantages of reusing data in daily research practice. The FAIR Data event offers interactive workshops and inspiring parallel sessions demonstrating good practices of FAIR implementation, and celebration of the RDNL Dutch Data prize.

We welcome proposals for 1 hour relevant workshops, before October 7.

For more details please see here!

The Dutch Data Prize

Every two years, the Dutch Data Prize is awarded to an individual or a team that makes research data FAIR. In order to have a chance to win this prize, you can nominate a dataset produced by yourself or by another individual or research group. Nominations are restricted to research that was lead or primarily conducted by research-performing organisations in The Netherlands. The deadline for nominating datasets is September 30.

Submit your dataset here!
